

What is TRBOnet?

TRBOnet is a powerful control room solution designed to work with MOTOTRBO digital radios. The fully IP based system gives a dispatcher the ability to make quick and effective conversations with radio users in the field. Track radios equipped with GPS.

Features

Voice Dispatch

One-to-One calls, One-to-Many calls straight from a pc to a radio or a group of radios

Location Tracking

Track your radios in the field. Create Geofencing rules for radios. Playback routes of radio.

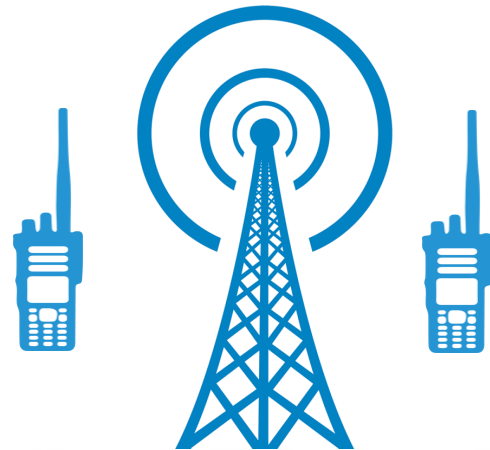

Voice Recording

Playback all voice calls between radios or between dispatcher and radios. Export recordings for evidence.

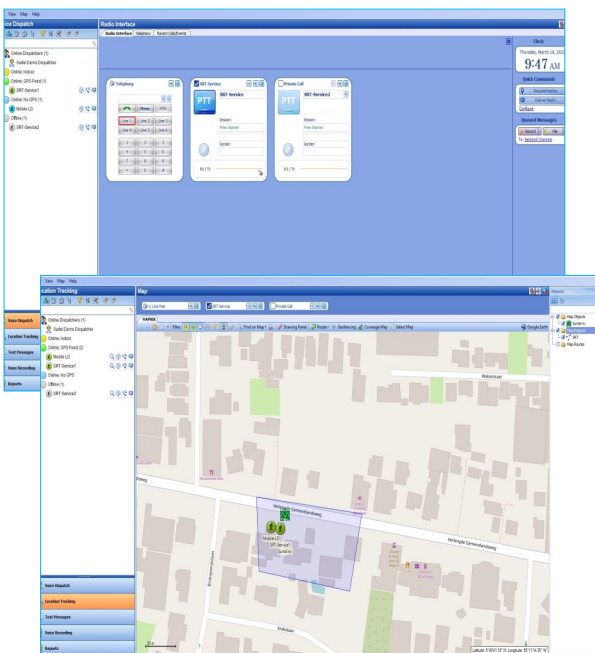

Text Messages

Send messages to a radio or a group of radios. Export messages for evidence.

Other Features

- **Telephone interconnection:** Connect your own IP PBX system or Public Telephone Network to TRBOnet to make and receive calls in TRBOnet.
- **Lone Worker:** Get an alarm automatically when a radio user does not respond in a predefined time.
- **Geofencing:** Get an alarm in TRBOnet when a radio user enters or leaves an area.
- **Reports:** Generate reports about radio status, speeds, speeding, etc.
- **Man Down:** Get an alarm in TRBOnet when a radio user with their radio is down on the floor.
- **Radio Management:** See radio status, battery level, disable/enable radios, monitor radios.
